To

The Principal Sir

MTIET

Sub: - MTIET – NSS-MTIET- RQUEST FOR PERMISSION TO ORGANIZE AWARENESS PROGRAM ON SWINE-FLU – Reg.

Sir,

As a part of NSS activities, the NSS-MTIET was planning to organize **AWARENESS PROGRAM ON SWINE-FLU** in Melumoi village. In connection to the above program I request you to give permission to organize the program on 20-11-2017 along with all the faculty & students. This is for your kind perusal.

THANKING YOU

Yours faithfully

N.V.KISHORE KUMAR, 13/11/17

CO-ORDINATOR, NSS - MTIET

REPORT ON

“AWARENESS PROGRAM ON SWINE-FLU”

Organized by NSS-MTIET on 20/11/2017

Mother Theresa Institute of Engineering And Technology conducted the swine flu awareness program on 20/11/2017 in Melumoi village. Where 95 students & 5 faculty members are attended the program.

Swine influenza is an infection caused by any one of several types of swine influenza viruses. Swine influenza virus (SIV) or swine-origin influenza virus (S-OIV) is any strain of the influenza family of viruses that is endemic in pigs. As of 2009, the known SIV strains include influenza C and the subtypes of influenza A known as H1N1, H1N2, H2N1, H3N1, H3N2, and H2N3.

The Swine flu was initially seen in humans in Mexico in 2009, where the strain of the particular virus was a mixture from 3 types of strains. Six of the genes are very similar to the H1N2 influenza virus that was found in pigs around 2000.

Swine influenza virus is common throughout pig populations worldwide. Transmission of the virus from pigs to humans is not common and does not always lead to human flu, often resulting only in the production of antibodies in the blood. If transmission does cause human flu, it is called zoonotic swine flu. People with regular exposure to pigs are at increased risk of swine flu infection.

The students created awareness to the villagers about the following regarding swine-flu

- Signs and symptoms

- Humans

- Virology

- Transmission

- Structure

- Diagnosis

- Prevention

- Swine

- Surveillance
